

ABSTRACT OF THE DISCLOSURE

The invention is based on a substrate conveying module (1) for conveying substrates into a workstation (3) for inspection, measurement, or processing of the substrates, in which on because of connecting elements (4a, b) in at least two side walls (1a, b, c) of the substrate conveying module (1) and/or in at least two side walls (3a, b, c, d) of the workstation (3), the substrate conveying module (1) can, at the installation location of the workstation (3), be flexibly connected thereto in different orientations with respect to the workstation (3) and/or can be coupled at different points to the workstation (3).
